

(57) Abstract

The invention relates to a joint arrangement
 for a surface structure, such as a protecting
 plate, element or the like, which surface
 structure is meant particularly for covering
 of ground together with one or several other
 surface structures for ^{improving} temporary protecting ^{and}
 coating and/or like of the ground. In connec-
 tion with the surface structure there has
 been arranged at least a joint arrangement
 for removable attachment of one or several
 adjacent surface structures ~~to the same~~ and
 the thermal insulation (1), that comprises at
 least one, essentially plastic based, such as
 cellular, expanded, foamed plastic structured
 or a like thermal insulation layer (1'). The
 joint arrangement ^{includes} comprises a joint piece
 (x), by means of which the surface structures
 may be coupled with each other essentially by
~~corners of the same by means of~~ a locking
 assembly (y) ^{at the corners thereof,} operating advantageously by
 quick-locking principle.
